Syringe services programs (SSPs) serve as a safe, effective HIV prevention method for people who inject drugs (PWID) to exchange used syringes for sterile needles, thereby significantly lowering the risk of HIV transmission. Since the 1980s, SSPs in conjunction with other HIV prevention strategies have resulted in reductions of up to 80% in HIV incidence among PWID.

- There are currently 194 syringe services programs in 33 states, the District of Columbia, the Commonwealth of Puerto Rico, and the Indian Nations. (NASEN)
- This map shows the location of 196 cities with SSPs.
